# The Crooked Tower: Supplemental Maps

Version v-0.4

Additional Maps for the Crooked Tower as  
presented in module FR-DC-STRAT-DUNGEON-01.

# CREDITS

**Project Lead: Noah Grand**

**Writer:** Kevin N. Haw. <http://www.KevinHaw.com>

**Editor: Noah Grand**

**Playtesters:** Brad Wong, Carlos Sanabria, Amanda Der Bedrosian ,  
Robert Conrrad, Sergio Alvarez, John Trager, Burke Adams, Dido  
Salazar, Jeff Kessler

**Cartography:** Kevin Haw, using Dungeondraft v12.0.1,  
(<https://dungeondraft.net/>) with the following asset packs:  
• MapBits, v1.3 by Clay Robeson  
• MilsbysMaps Token Collection 1, v1 by Matt Milby  
• WFW Sample Pack, v1 by White Fox Works  
• Cyberpunk Interiors 03 by PeaPu

## ORGANIZED PLAY

**D&D Adventurers League Wizards Team:** Brandy Camel, Chris  
Lindsay, Chris Tulach

**D&D Adventurers League Administrators:** Ma'at Crook, Claire  
Hoffman, Greg Marks, Toni Winslow-Brill

Special Thanks to the Strategicon Adventure League Staff and the  
DMs and players of OrcCon 2026 who played the module.

# INTRODUCTION

This document presents supplemental material for use when running the Adventure League module FR-DC-STRAT-DUNGEON-01, "The Crooked Tower." It is not a stand alone product – ***you must have already purchased that module separately to use this document!***

FR-DC-STRAT-DUNGEON-01 can be purchased online at [DmsGuild.com](http://DmsGuild.com).

This document is split into two parts: instructions for building props for the final puzzle of the module and a series of maps

## PART 1: PROPS

It is possible to make a set of props for your players to use to solve the final puzzle and open Quintus'es safe. This consists of two 3D printed architectural models like the ones the players find and a cardboard sheet with a slot cut in it to simulate the safe door the characters need to open.

You will need access to a 3D printer, some magnets (detailed below), paint. A sheet of cardboard, and some basic craft supplies.

the keyslot, and rotate the models. When they have done this with the two models in different gravitational orientations, they have opened the safe and you should proceed to part 4 (the Final Battle) in the module.

### ARCHITECTURAL MODEL PROP

---

First, obtain the STL file included in this bundle (CrookedTower\_Upper\_\*.stl ) and print out two copies. It is suggested you print them at full scale in PLA with 20% or greater infill.

There are two divots in the side of the tower suitable for concealed 0.5 inch disk magnets. You will need four magnets total. I was able to find them at Home Depot, but there are many other online sources.

Insert the magnets into the divots and secure them with tape in order to test the fit and orientation.

In my case, I made sure that the upper magnet in cube B3 had its South pole facing out so that the North end of a compass needle was drawn to it. The second magnet in cube B2 was reversed (North pole outwards so that it attracted the South end of a compass needle).

If this is done on two models, they will snap together so they face different directions.

Once you are happy with the magnets, superglue them in place and cover the gaps with putty. Then sand, primer, paint, and seal it as you wish.

I found that a white primer base and running a black permanent marker over the lettering works quite well.

### SAFE DOOR PROP

---

To make the safe door, print out the next page, glue it to a sheet of cardboard, and use a craft knife to remove the page header and footer and the light blue area. Once this is done, you will have a prop that the players can slot the two models into and then turn when they are attached via the magnets. It is suggested that once they have done this with two models that have the correct gravitational orientation, they can open the lock (see Part 3 of the module).

### USING THE PROPS

---

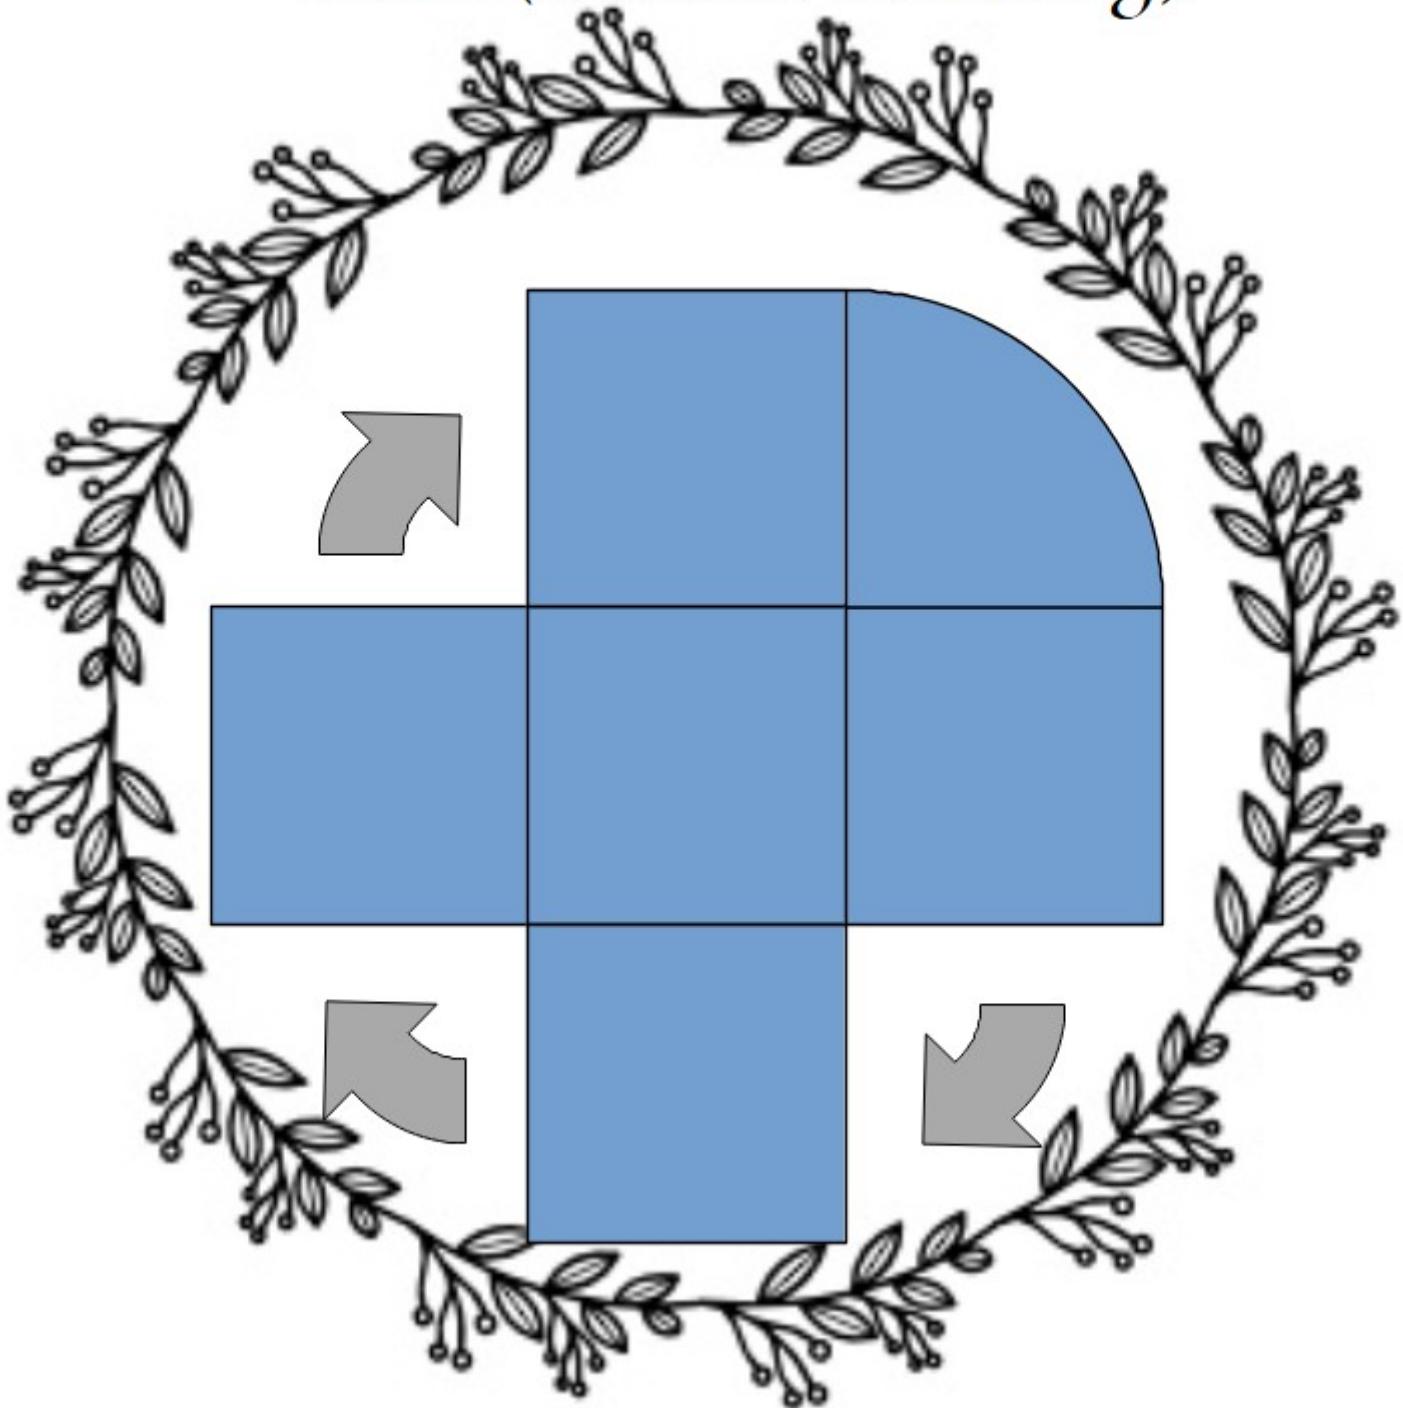

During play give players one each of the architectural models when their characters investigate rooms B4 (Matilda's Workshop) and B5 (Aesir's Quarters). Encourage them to examine the props, dropping hints as needed until they discover the two clamp together with the hidden magnets.

When the characters examine the safe in B7 (Quintus' Quarters) give the players to safe door prop. The players should place the two models together, pass them through

## SAFE DOOR PROP

Cut out the below as described previously.

# *Helder's Multikey Reinforced Lock (Patent Pending)*

## PART 2: MAPS

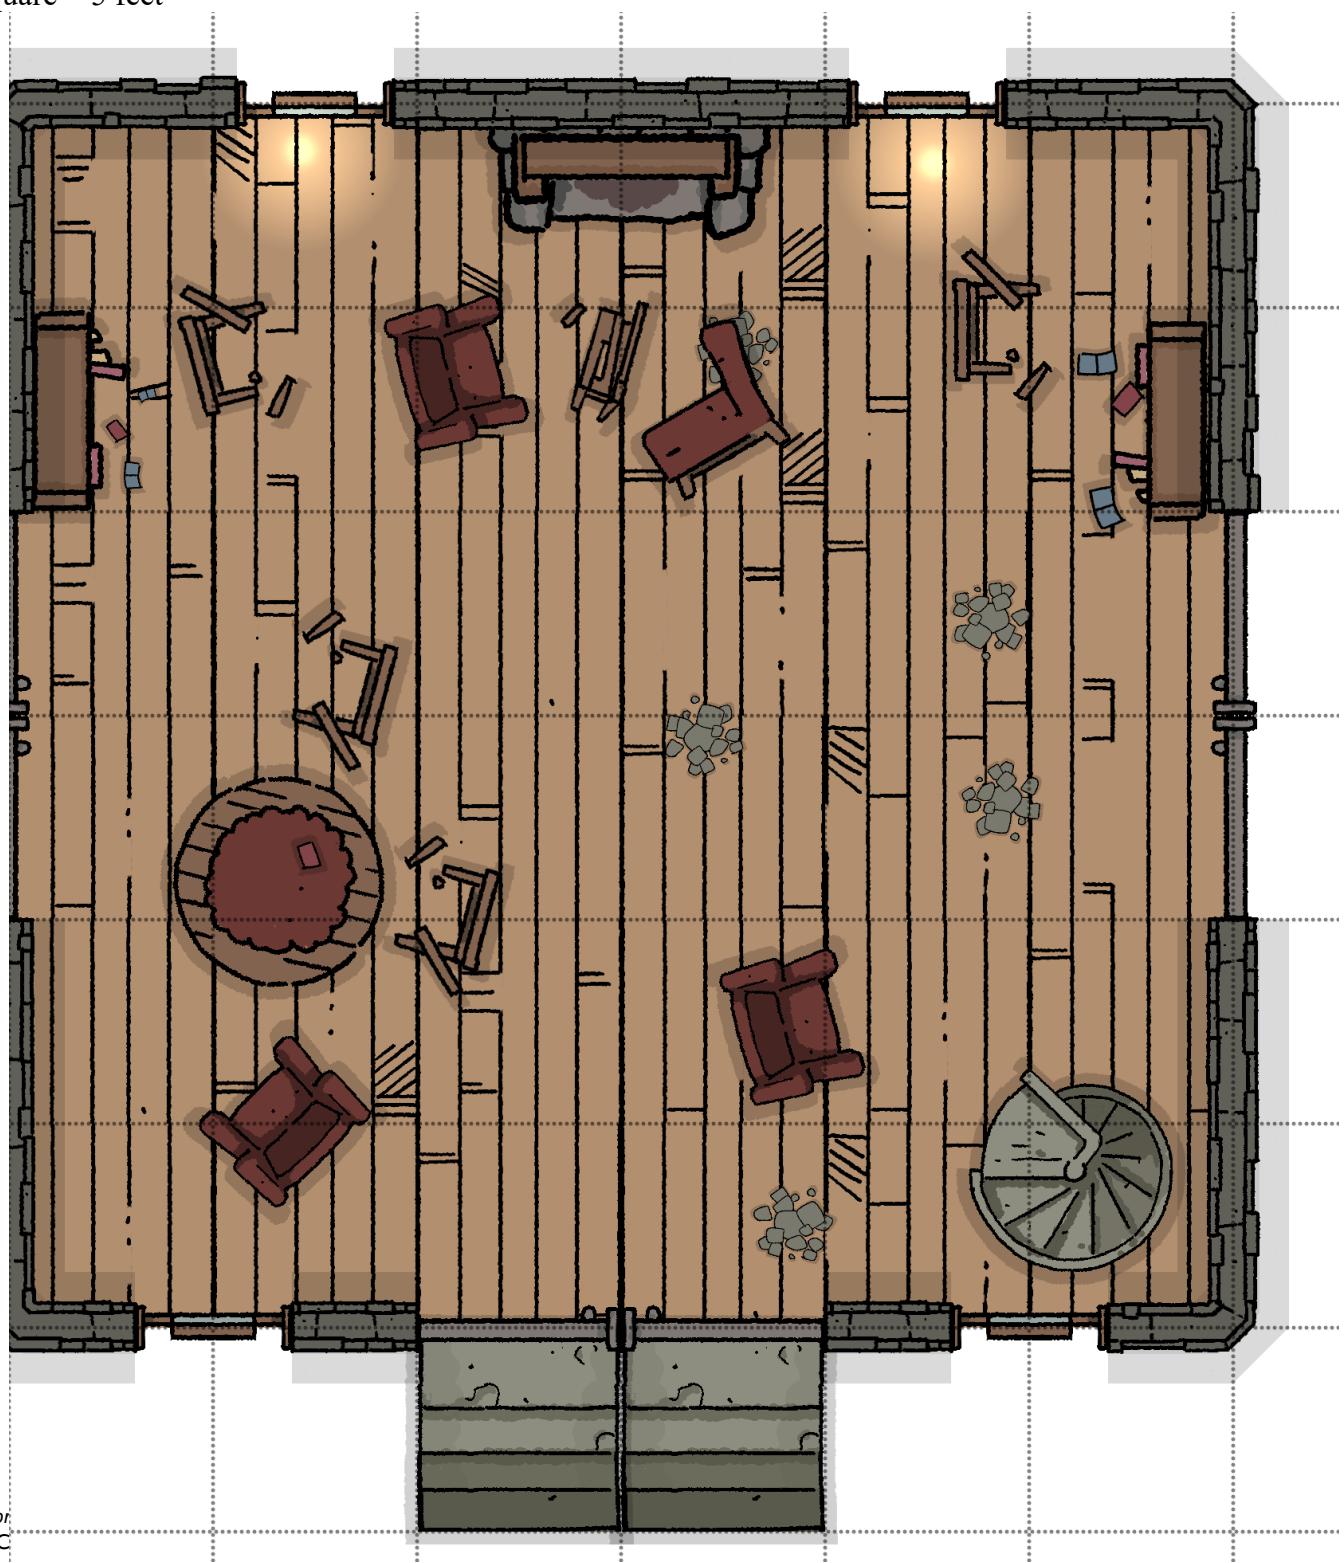

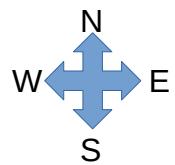

The Crooked Tower is divided into lower and upper sections. The lower portion (**Area A**) consists of four 30 foot cubical rooms connected in an endless, four dimensional Möbius Strip.

The upper portion (**Area B**) consists of seven 30 foot cubical rooms, arranged as a hypercube. What would normally be a three dimension space is pulled into a fourth dimension in various ways. Rooms B1-B3 serve as hubs that connect to every other room, while Rooms B4-B5 are the former quarters of the four wizards who built the tower.
